

Quarter Inch

CAT AUTOMATIC TAPE SPLICERS

Quarter inch

A compact machine for producing quick, accurate edits in 1/4" tape. Tape is cut by precision guillotine channels machined in anti-magnetic steel, which are self sharpening, and capable of removing tape segments accurately down to a fraction of a millimetre. They make a clean cut at a precise angle (60°) automatically holding, aligning and abutting the two ends to be joined.

CAT splicers use pre-cut adhesive joining tabs mounted on a continuous strip within a cassette. One press of the dispensing arm transfers a tab from the cassette to the magnetic tape in a single, controlled movement. The tab is automatically centred and aligned, giving a more reliable splice. Each cassette holds 250 tabs and is replaceable in a matter of seconds. There is one standard grade of splicing tape used which is suitable for virtually all tape types 22 micron (equivalent to our type 52-234).

The CAT quarter inch splicer is supplied packed without cassette, which should be ordered separately.

Half inch

Suitable for both half inch audio and video tapes, this operates on a similar basis to the quarter inch unit, but differs in detail. The tape is held in the channels by hinged clamps, then cut at 90° by replaceable blades, one mounted in each half of the unit. A single press of the top section, which houses the splicing tape cartridge, accurately locates a pre-cut splicing tab over the join.

A single grade of splicing tape is offered: 22 micron thickness for audio use (equivalent to Canford splicing tape 52-237) supplied in cassettes of 100 tabs.

The CAT half inch splicer is supplied complete with one 15 micron cassette for video use (no longer available as a spare), cotton gloves, and small crosshead screwdriver (to open most video cassettes).
